Dateiinhalt / Vergleich

1	#!/bin/sh
2	
3	# An example hook script to verify what is about to be pushed. Called by "git
4	# push" after it has checked the remote status, but before anything has been
5	# pushed. If this script exits with a non-zero status nothing will be pushed.
6	#
7	# This hook is called with the following parameters:
8	#
9	# \$1 -- Name of the remote to which the push is being done
10	# \$2 -- URL to which the push is being done
11	#
12	# If pushing without using a named remote those arguments will be equal.
13	#
14	# Information about the commits which are being pushed is supplied as lines to
15	# the standard input in the form:
16	#
17	# <local ref> <local oid> <remote ref> <remote oid>
18	#
19	# This sample shows how to prevent push of commits where the log message starts
20	# with "WIP" (work in progress).
