Dateiinhalt / Vergleich

1	#!/bin/sh
2	#
3	# An example hook script to prepare the commit log message.
4	# Called by "git commit" with the name of the file that has the
5	# commit message, followed by the description of the commit
6	# message's source. The hook's purpose is to edit the commit
7	# message file. If the hook fails with a non-zero status,
8	# the commit is aborted.
9	#
10	# To enable this hook, rename this file to "prepare-commit-msg".
11	
12	# This hook includes three examples. The first one removes the
13	# "# Please enter the commit message..." help message.
14	#
15	# The second includes the output of "git diff --name-status -r"
16	# into the message, just before the "git status" output. It is
17	# commented because it doesn't cope with --amend or with squashed
18	# commits.
19	#
20	# The third example adds a Signed-off-by line to the message, that can
21	# still be edited. This is rarely a good idea.
